1. Knobs are hand-turned in cherry, walnut, and maple. Inquire about other species.
2. Knobs with tenons: the tenons are slightly oversized in diameter. This is done purposely. To insert the knob in the drilled hole, use the serrated edges of a pair of pliers to crimp the tenon. When you apply a water based glue to the tenon, it will swell the wood fibers to make a tight fit.

Face grain knobs that require screws are drilled to approximately one quarter inch of the outside face. The method of turning and depth of hole allow a #12 wood screw to hold securely.

3. Knobs are burnished and shellac sealed. This level of polish allows for the knob to be stained, coated, or attached without further finish.

Knobs may also be ordered with special finishes at additional cost. Please inquire.
